3D-printing the holder for Pow-K

Due to its shape, this is not a straight-forward print.

The file versions are:

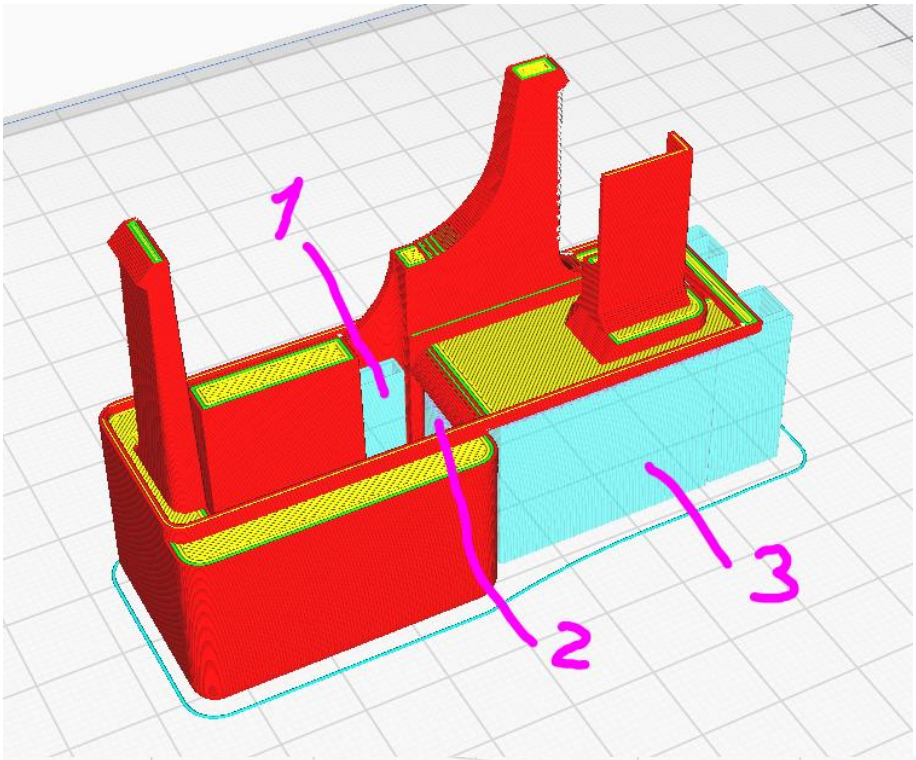

1. For Pow-K with ESP8266
2. For Pow-K+ with ESP32-S2-MINI

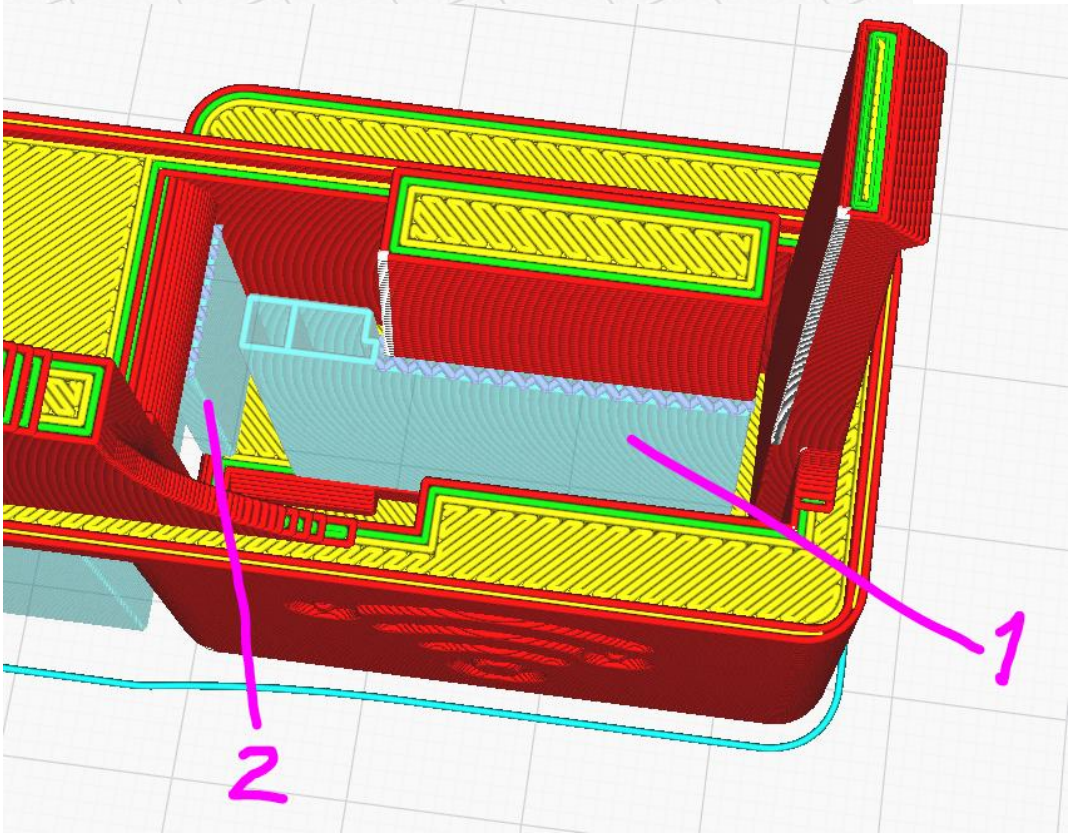

There might be better ways to do it; I placed it like this on the print table:

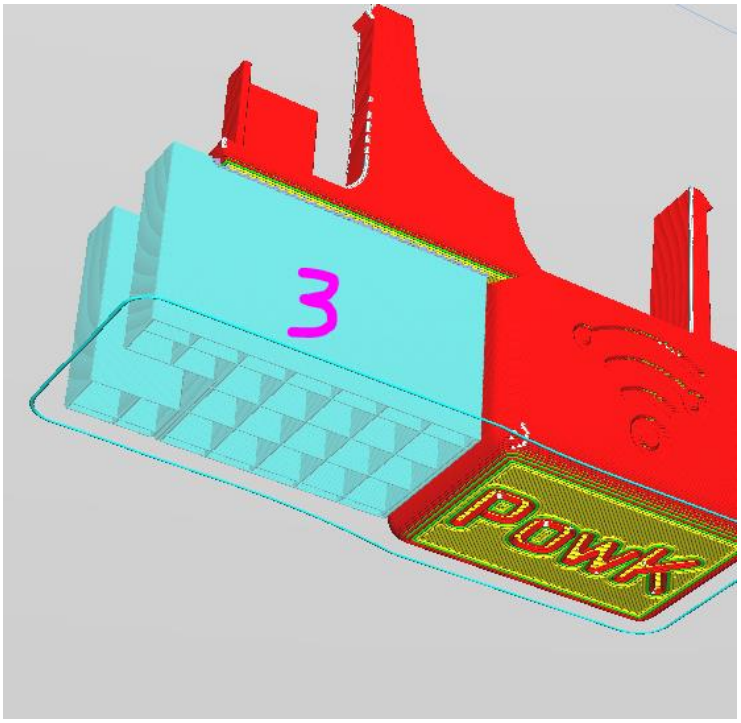

You'll need to print support, I got the best result by adding support manually in Cura.

I made 3 separate pieces of support shaped in such a way that they can be easily removed (I can do it by hand with a few "snaps"):

Good luck!
